Profile

Quantitative risk analyst and software engineer with hands-on experience building production systems for commodities trading. Currently develop business-critical C# applications at Petroineos covering risk management across a broad range of commodities and instruments. Background spans full-stack product development (React, Node.js, Python), cloud infrastructure (AWS, Azure) and data engineering, with a track record of shipping real software in fast-moving trading environments. Looking to apply a hybrid quant and engineering skillset to building externally-facing software products in fintech, trading technology, and beyond.

Skills

- **Languages & Engineering:** C#/.NET, Python, JavaScript/TypeScript, SQL. Production experience across desktop, services, and full-stack web.
- **Quant & Risk:** C# applications for risk management across commodities and instruments — pricing, P&L, exposure, and market data; derivatives, FX, and physical commodity flows.
- **Web & Product:** Full-stack delivery using React, Node.js, Three.js, Flask; designed, built, and deployed live consumer and B2B web applications.
- **Cloud & Infrastructure:** AWS (EC2, Lambda, S3, API Gateway, Route 53), Azure (Hyper-V, Intune, Functions), GCP, Citrix. ITIL v4 Certified.
- **Data & Analytics:** MSSQL, Power BI, Power Query, Excel/VBA; building data aggregation, ETL, and analytics pipelines on top of trading and operational data.

Experience

Quantitative Risk Analyst — Petroineos, London *2026 – Present*

- Develop and maintain business-critical C# applications used by trading and risk teams to manage exposure across a wide range of commodities and instruments — including crude, refined products, derivatives, FX, and freight.
- Build pricing, P&L, and risk tooling on the firm's core .NET platform, integrating real-time market data and trade flows.
- Work closely with traders and risk managers to translate front-office requirements into robust, well-tested software.
- Contribute to architectural decisions on a multi-developer codebase, raising engineering standards around testing, code review, and release process.

R&D Software Engineer — Chemwatch, Melbourne, Australia *Feb 2024 – 2026*

- Designed and shipped a full-stack web application for visualising shipping labels in 3D using React, Three.js, and Blender.
- Built and deployed a Gmail extension that uses LLMs to summarise users' inboxes; rolled out company-wide.
- Implemented Redis caching and a CDN on the company website, achieving 2–3× improvement in latency and throughput.
- Hands-on with AWS (EC2, Lambda, S3, API Gateway, Route 53) for deployment, automation, and serverless workloads.

Founder & Developer — GetRoasted.lol *Sep 2023 – Present*

- Designed, built, and shipped a live consumer web app where users get their photos 'roasted' by AI — React frontend, Python/Flask API, fully deployed and operating in production.

- Owned the full stack independently, from frontend and backend through to cloud hosting, payments-style flow handling, and ongoing operations.

Desktop Support Engineer — Braemar Shipbroking, London *Jan 2022 – Sep 2023*

- Built a large-scale commodities data aggregation system in Python that delivered real-time futures, FX, and commodity prices to brokers across the trading floor.
- Developed trade settlement software and automated invoice generation, removing significant manual workload and reducing documentation errors.
- Created a collaborative broker platform for sharing and matching long/short positions, improving market-making efficiency across desks.
- Built bespoke productivity tools for dry bulk, tanker, and specialised cargo desks, working directly with brokers to capture requirements.
- Ran data analytics on shipping market data using Power Query and Power BI, improving data quality and trading insights.
- Supported software, infrastructure, and trading-floor operations for a leading London-based shipbroking firm specialising in commodities and maritime transportation.

Data Analyst / Administrator — Nightingale Hammerson *Jan 2020 – Sep 2020*

- Owned a large MSSQL database supporting complex fundraising campaigns, coordinating with multiple stakeholders across the organisation.
- Built an automated reconciliation process using Excel VBA that cut process time by ~3× and reconciled over £3.2 million in donations.
- Developed strong analysis and visualisation skills with Excel, Power BI, and SQL on large operational datasets.

IT Solutions Provider — E-computing *Jan 2019 – Jan 2020*

- Provided IT repair and technology solutions to business and consumer clients.

Education

BEng Mechanical Engineering (2.2) — University of Sheffield *Sep 2016 – Jun 2021*

- Dissertation: collaborated with Mitsubishi UK to build a neural network model for prognosis and failure prediction of engine bearings — achieved state-of-the-art time-to-failure predictions for the automotive industry.
- 1st Place — 'Engineering, You're Hired' competition: designed and presented a method for safer urban cycling.
- Societies: Poker, Pool, Programming.

A-Levels & GCSEs — Alleyn's School *Sep 2009 – Jun 2016*

- A-Levels: Mathematics (A), Physics (A), Design Technology (B). GCSEs: 5 A*, 4 A, 1 B. Cricket 1st XI.

Hobbies & Interests

Keen poker player · Boulderling & rock climbing · Pool & snooker · Mountain biking
